Kick-off Transition to Azure

Alfred Beekhuizen

Cloud Solution Architect

Alfred.beekhuizen@proact.nl

Agenda

- Welcome and introduction
- Project team
- Approach
 - Azure
 - Workshops
 - Requirements
- Next steps

Introduction

Workshop Team Proact

- David Green (Consultant)
- Matt Jeavons (Consultant)
- Stephan Fielding (Account Manager)
- Nik Bartlett (Cloud Architect / Design)
- Onno Jansen (Cloud Consultant / Build)
- Take Bakker (Cloud Consultant / Build)
- David Rikkoert (Cloud Architect / Design)
- Alfred Beekhuizen (Cloud Architect / Design)

Workshop Team Canopus

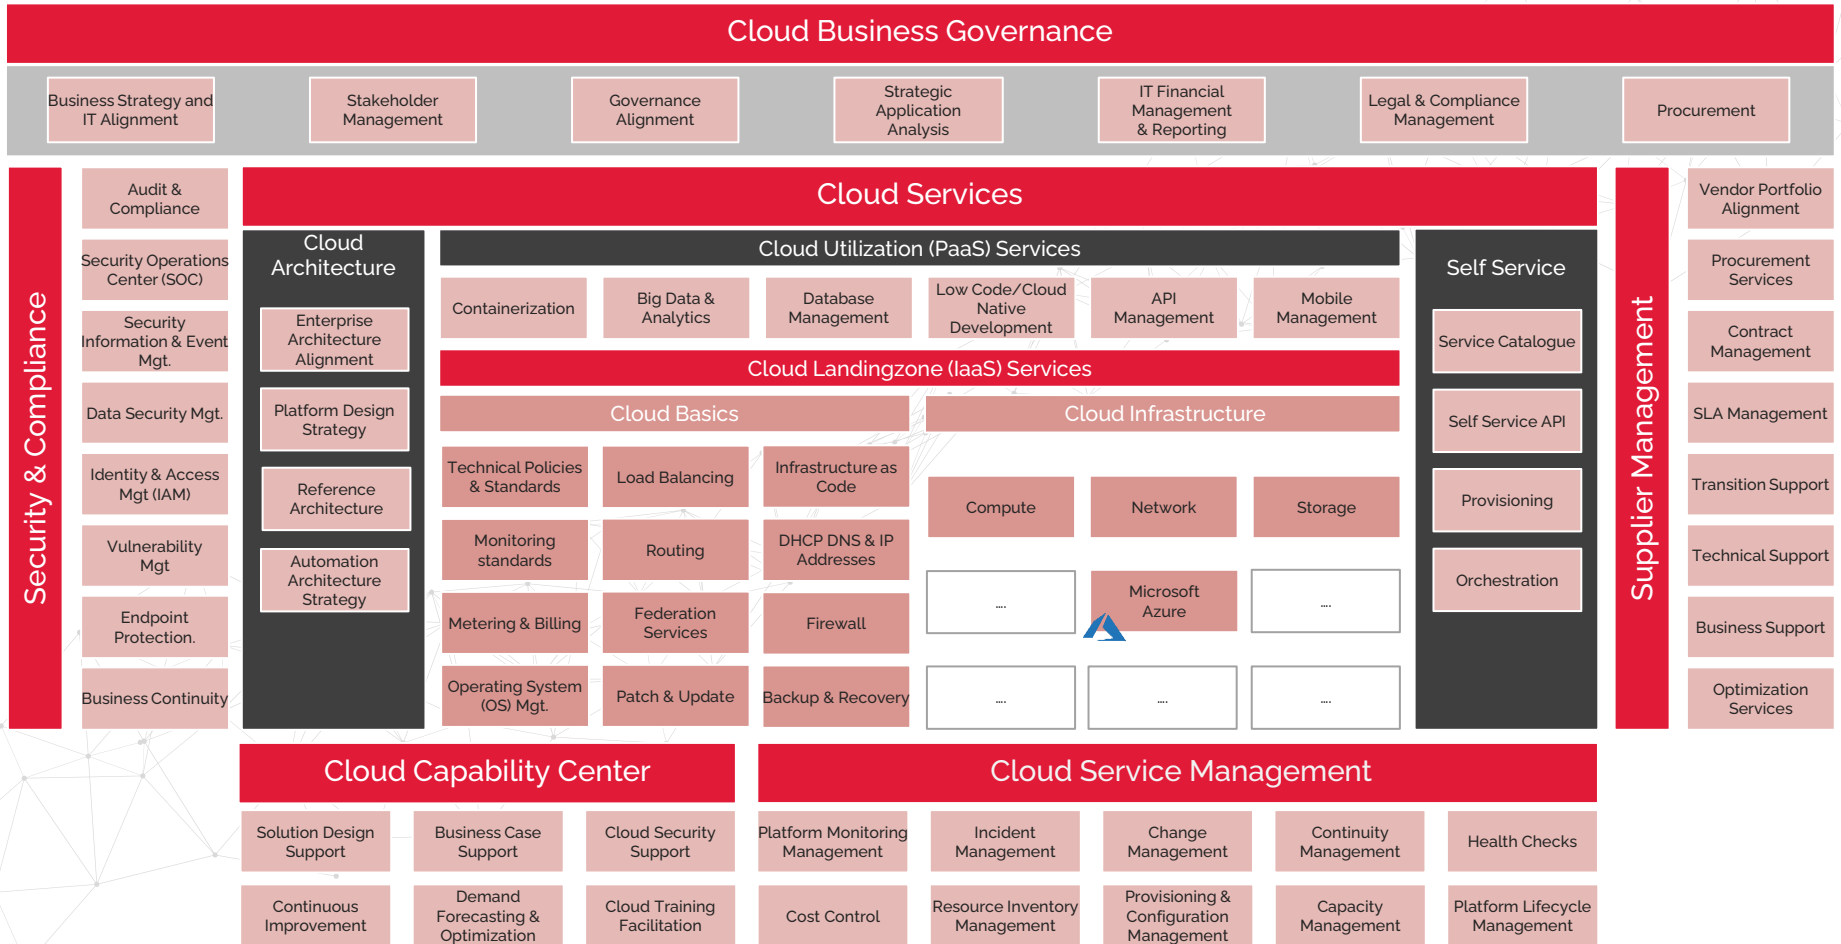

- Jonathan Hogg (Service Delivery Manager)
- Gohir Rashid (Data Strategy Team)
- Ravi Singh (Data Strategy Team)
- Mark Sciberras (Lead digital platform architect)
- Jess Luscombe (PMO analyst)
- Peter Tyson (Project Manager)
- Karolis Mickaitis (Infra Manager)
- Paul McCarthy (Cyber Security Manager)
- Rachel Wiltshire (PMO Manager)
- Chris Howell (EXL; Project Manager)

Project Approach

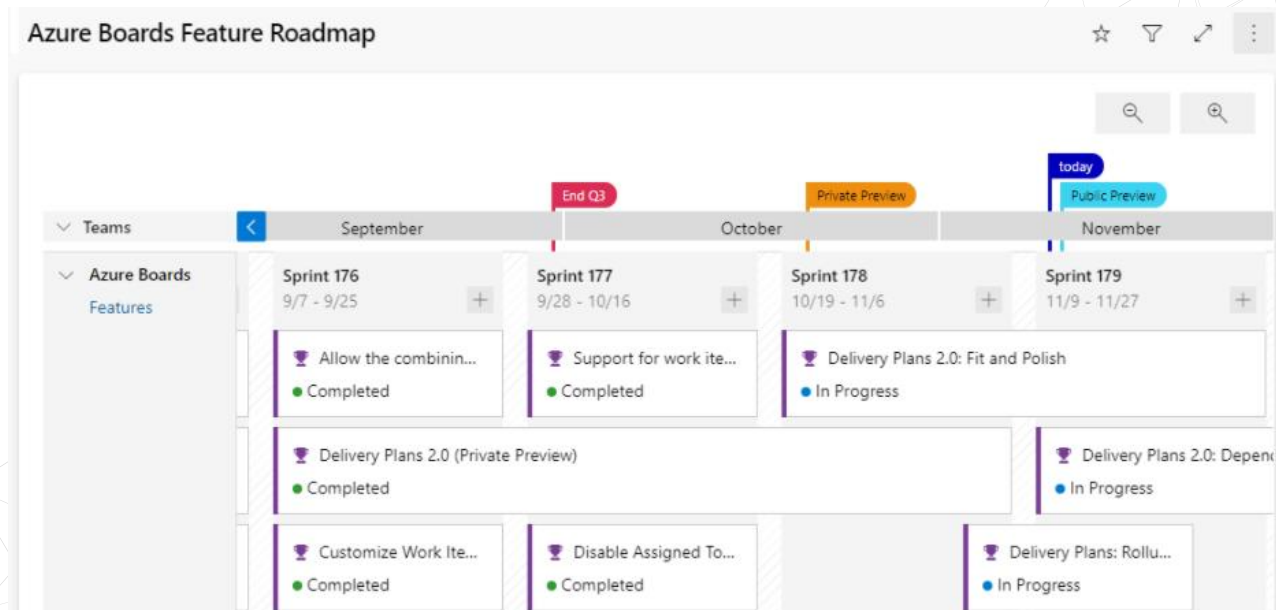

Cloud Target Operating Model

PROACT

Scrum / Agile

PROACT

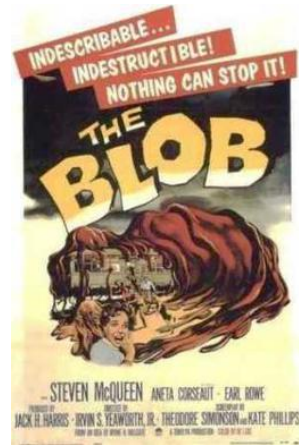

Azure Landing Zone (Solution)

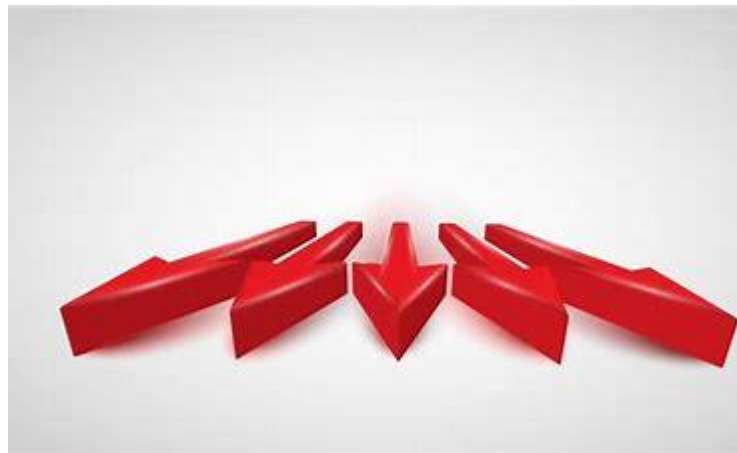

Microsoft Azure Cloud

- ***“Azure is like a living organism; continuously changing, growing and improving”***
- > 60 Regions Worldwide, 140 Countries, 160+ DC's
- Worldwide Microsoft DevOps teams publish continuous improvement changes 24/7 to Azure
- Marea Subsea Cable (Microsoft & Facebook)
 - Virginia USA-Spain Europe (160 TBps)
- Expanding functionality
 - Windows Server 2022 Azure Edition (Public Preview)
- ***“Main question is not if it is possible, but how do you implement it in a smart way”***

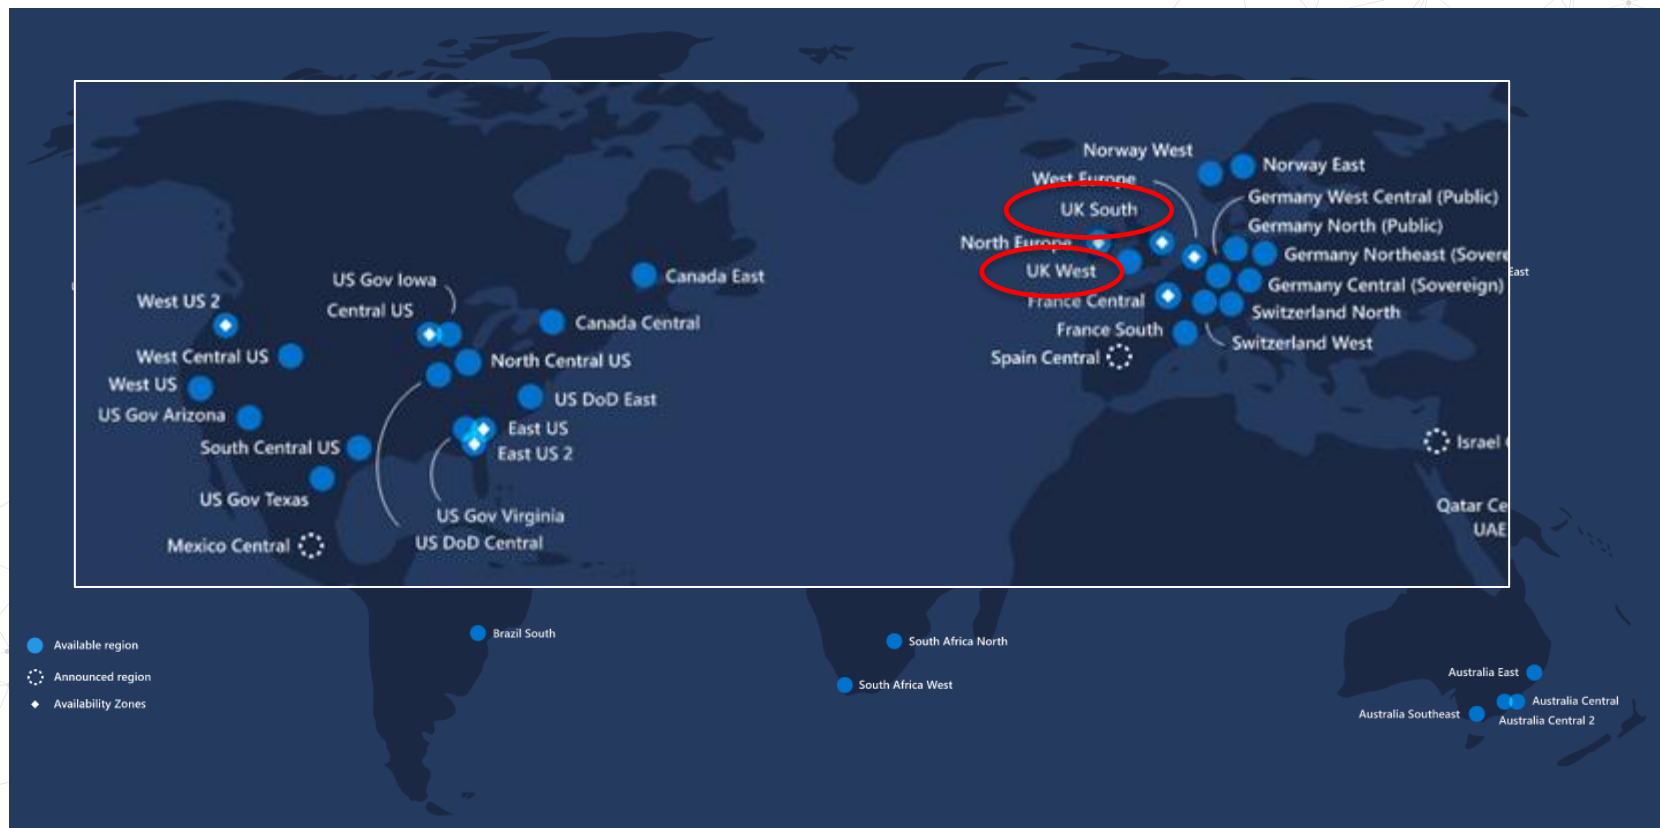

Using Microsoft Azure Cloud

- Design Decisions balance on multiple viewpoints
 - ***Functional***
 - ***Performance***
 - ***Scaling***
 - ***Security***
 - ***Cost***
- Which result in questions like
 - Use multiple Tenants?
 - Use multiple Subscriptions?
 - Use multiple VNET's?

Azure Regions

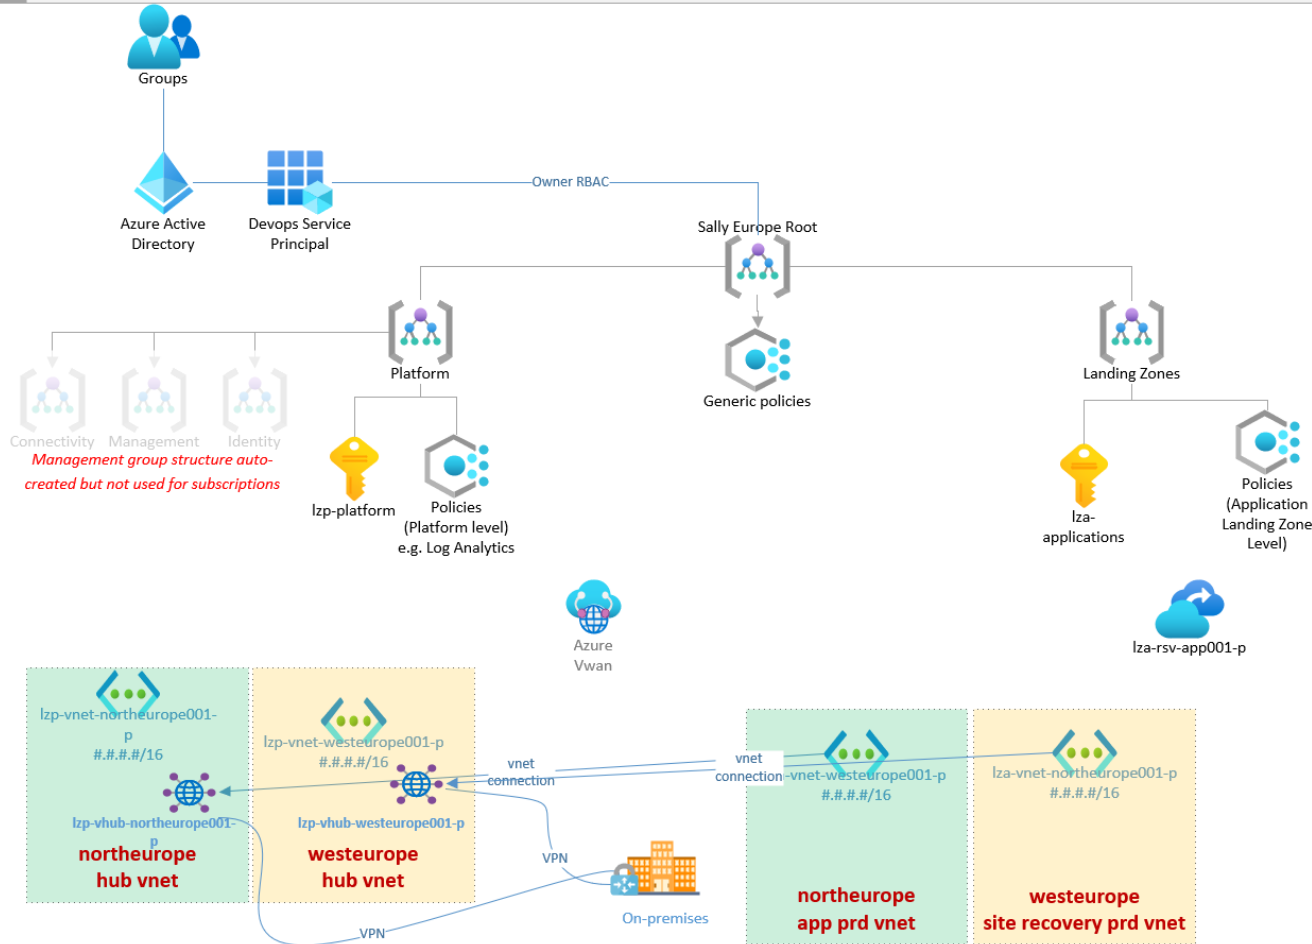

Azure Landing Zone

- Deployment of Standard Azure Landing Zone
- 1 foundation/platform subscription
- 1 application subscription
 - Production Application VNET (UK South)
 - Site Recovery VNET (UK West)
- Azure Virtual Wan (to be discussed)
 - Site-to-Site VPN Onprem ↔ VNET (UK South)
 - Site-to-Site VPN Onprem ↔ VNET (UK West)

Management Groups & Subscriptions

PROACT

Landing Zone vs. Application Solution Design

- Landing Zone Design
 - 200+ [Design Decision Library](#)
 - Best-practice configuration choices for resources
 - Continuous improvement/growth based on new cases/workloads/solutions
 - Availability & Redundancy best-practices
 - Security Best Practices
 - Network (security) architecture
- Application Solution Design
 - Workload sizing
 - Workload Availability & Redundancy requirements
 - Workload-specific security requirements
 - Cross-application network communication

Azure Landing Zone (Workshops)

Azure Landing Zone Workshops

- (1) Kick-Off meeting (This meeting)
- (2) Foundation Workshop (Monday Sept, 13)
- (3) Networking Workshop (Friday, Sept 17)
- (4) Security Workshop (Wednesday, Sept 22)

Foundation Workshop

A dark blue horizontal bar with rounded ends, containing the text "Cost Management".

Cost Management

A dark blue horizontal bar with rounded ends, containing the text "Monitoring and Alerting".

Monitoring and Alerting

A dark blue horizontal bar with rounded ends, containing the text "Backup and Recovery".

Backup and Recovery

A dark blue horizontal bar with rounded ends, containing the text "Updates management".

Updates management

A dark blue horizontal bar with rounded ends, containing the text "Resource Organisation".

Resource Organisation

Networking Workshop

Azure Virtual Networks

Virtual Network Limitations

Hybrid Networking

Hybrid Connectivity

Connectivity Options

ExpressRoute

Virtual WAN

Hub and Spoke

Networking Traffic Ingress/Egress/Transit

Security Workshop

What is security?

Cloud security

Security Baseline

Identity, Device, Network, Compute, Data

Governance & Dashboards

Security Operations Center (SIEM & SOAR)

Hybrid Identity

Identity Access Management

Identity resource Access

Next steps

Requirements

Category	Type	Description
Azure	Subscription	2 Azure subscription acquired via Cloud Service provider
Naming		Customer Abbreviation
Network	IP subnet plan	Network Subnet plan with all IP ranges currently in use, to determine 2 unique IP ranges (/16 = 255.255.0.0)
DevOps	Available	Existing or new DevOps Organization, https://dev.azure.com
DevOps	Available	New DevOps Project, "AzureInfra"
DevOps	Permission	DevOps Project Administrator within the Azure DevOps projects
Azure AD	Conditional Access	No device-based Conditional Access to Azure Devops Azure AD "Enterprise Application" (Multi-Factor Authentication is OK)
Azure AD	Permission	Right to create Management Groups within the Azure AD Tenant (e.g. Global Admin)
Azure AD	Permission	Permissions to Attach Azure Policies to Management groups
Azure AD	Permission	A Service Principal / Managed Identity Account to connect to the DevOps Project to deploy with Terraform
Azure AD	Permission	Permissions to Attach subscriptions to Management Groups
Azure AD	Permission	Permissions to create Azure AD Groups (Role Based Access Control)
Azure AD	Permission	Permissions to add members to Azure AD Groups

Next steps?

1. Azure Design (David/Alfred)
2. Azure Landing Zone Deployment (Onno/Take)
3. Application Solution Design (...)
4. Application Deployment (...)

In parallel:

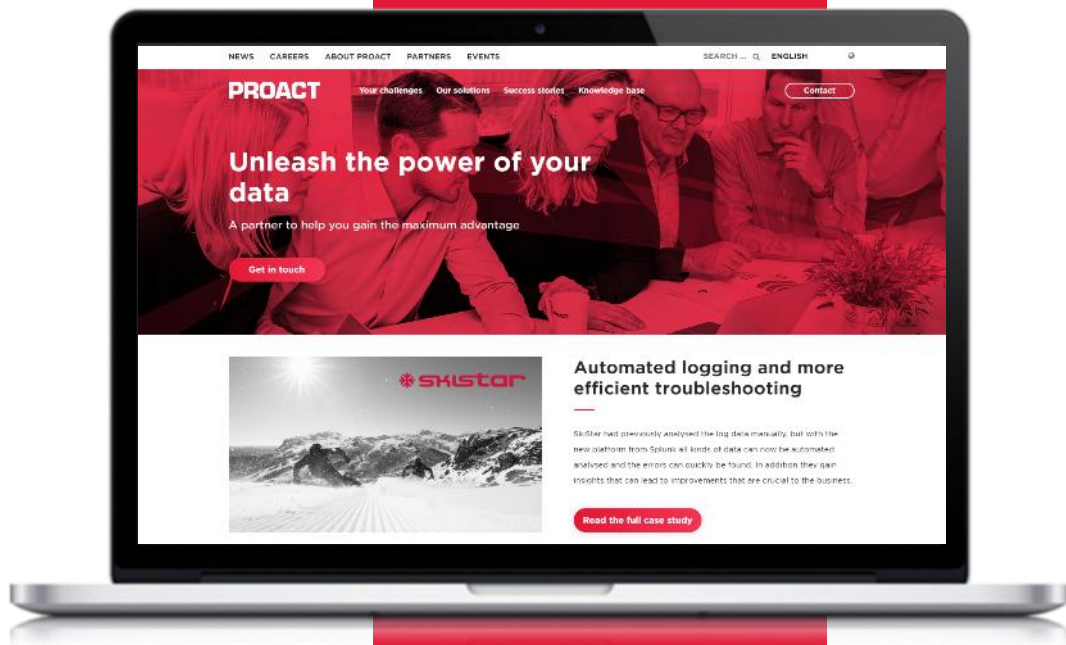

1. Site-to-Site VPN configuration (public IP / onprem Firewall specs)
2. IP Plan (determine 2 unique /16 ip ranges)
3. Global Admin accounts in Azure AD
4. Configure Azure DevOps organization
5. Technical Contacts
6. Arrange subscriptions (via Cloud Service Provider)
