Expert Appointment: 5 use cases identified so far, with initial focus on legal experts

Legend

-  Most impactful
-  Less impactful
-  Not relevant

Prioritised Use Cases

ID	Use Case	Key Features	Lawyers	Loss Adjusters	Forensic Accountants	Long Tail of Experts
A	Checking whether an expert is needed	- Analyse claim details to determine if an expert (loss adjuster, lawyer, technical specialist, etc.) is required based on a set of checks - Flag to adjuster with rationale	✓	○	○	✗
B	Identifying similar historical claims to draw insights from past expert reports	- Central repository of past claims that have had an expert appointed to them - Ability to search / recommend "similar" historical claims - Summarise past reports to improve adjuster decision-making	✓	○	○	✗
C	Selecting the most appropriate expert	- Track KPIs on expert quality (e.g. outcomes, quality of advice, cost effectiveness, fit for Canopus) - Develop a database of expert scorecards per claim segment - Ability to browse best-fit expert per claim within module for "checking whether an expert is needed"	✓	○	○	✗
D	Managing expert output – instruction and scoping	- Draft scope and instructions for expert work to ensure scope is sufficiently narrow based on learnings from past cases - Pre-populate appointment letter for adjuster to review	✓	○	○	✗

ID	Use Case	Key Features	Lawyers	Loss Adjusters	Forensic Accountants	Long Tail of Experts
E	Managing expert output – cost management	- Assess budgets provided by experts to check if appropriate for claim work product - - Automatically identify leakage in invoices submitted by both legal and non-legal experts	✓	✓	✓	○

Notes on “Long Tail of Experts”

Use Case	Observation
A	May be too case specific for a general approach
B	May be too granular for helpful comparisons
C	Should capture KPIs for all experts, but may not have sufficient volumes to select “best fit”
D	Advice needed may be too granular to use a standard template

Note:** Comparison of bill review providers — not to be built out as part of the tool.
