Expert Appointment API Documentation

1. Service

Service Details

- **Service Name:**
- **Python Version:** >=3.13

2. API Overview

Purpose

Base URL

/api/

The API is mounted at the /api/ path with the following sub-routes:

Route Group	Prefix	Purpose

OpenAPI Documentation

/api/openapi.json

Response Format

- **Default Format:** JSON (ORJSONResponse)
- **Compression:** GZip enabled for responses > 1KB

Middleware

- GZip compression applied to responses ≥ 1000 bytes
- HTTP logging middleware tracks requests with user context (user_id , user_name)

3. Authentication & Authorization

Authentication Method

- **Type:** JWT Bearer Token (Azure AD)
- **Header Required:**

Authorization: Bearer <JWT_TOKEN>

Authentication Bypass (Development Only)

API_AUTH_ENABLED=false

Role-Based Access Control (RBAC)

- Required roles: AppUser , Admin , Or System
- Roles extracted from JWT roles claim
- Dev override: API_ELEVATE_ROLE_TO_ADMIN=true

Environment Configuration

Parameter	Type	Default	Description
API_AUTH_ENABLED	Boolean	True	Toggle authentication enforcement
API_ELEVATE_ROLE_TO_ADMIN	Boolean	False	Elevates all users to Admin (dev only)
AZURE_JWKS_URL	String	—	Azure JWKS endpoint
AZURE_ISSUER_URL	String	—	Azure token issuer
API_CLIENT_ID	String	—	Azure AD application client ID

4. Endpoints

< Explain all endpoints in the table>

Endpoint	Method	Description	Notes

5. Endpoints to Table Mapping

Endpoint	Table	Operation(SELECT/INSERT/UPDATE/DELETE)	Description

6. Error Handling

Standard Error Codes

Code	Meaning	Cause
200	OK	Successful request
401	Unauthorized	Missing/invalid token
403	Forbidden	Insufficient roles
404	Not Found	Claim not found
422	Unprocessable Entity	Invalid schema
500	Internal Server Error	Unexpected error

Error Response Format

```
{
  "detail": "Error description"
}
```

Common Error Scenarios

- No bearer token → 401
- Token expired → 401
- Invalid audience → 401
- Insufficient roles → 403
- Claim not found → 404
