

Database Schema Documentation

Last updated by | Wadhwa, Chirag | 19 May 2026 at 11:20 BST

Overview

This section contains the DDL scripts for all tables used in the Expert Appointment.

Each table definition includes:

- 1. Schema and table name
- 2. Purpose
- 3. DDL script
- 4. Constraints & indexes
- 5. Migration details

Table Definition

<This structure must be repeated for every table in the expert appointment>

Table : <schema>.<table_name>

1. Purpose

[Describe what this table stores and its role in the system]

2. DDL Script

```
CREATE TABLE IF NOT EXISTS claims.tbl_ref_experts (  
  expert_id          SERIAL PRIMARY KEY,  
  expert_type        TEXT NOT NULL,  
  expert_firm_name    TEXT NOT NULL,  
  is_active          BOOLEAN NOT NULL DEFAULT true,  
  date_created        TIMESTAMPTZ NOT NULL DEFAULT now(),  
  last_updated        TIMESTAMPTZ NOT NULL DEFAULT now(),  
  CONSTRAINT uq_expert_type_firm  
  UNIQUE (expert_type, expert_firm_name)  
);
```

3. Schema Details

Column	Data Type	Constraints	Description

4. Keys & Constraints

- Primary Key:
- Foreign Keys:
- Unique Constraints:

5. Migration Details

Item	Path	Notes
Migration File Path	/<version>__<name>.sql	
Schema File Path	/db/schema/<table>.sql
