Introduction

This wiki documents database seed scripts used to populate reference and mapping tables within the `claims` schema. These scripts initialize:

- Legal expert firms and their types
- Jurisdiction master data
- Mapping between experts, jurisdictions, and claim divisions

These reference datasets are foundational for downstream claims workflows, reporting, and expert assignment logic.

Expert Reference Data (`tbl_ref_experts`)

This script inserts a master list of legal expert firms under the expert type "**Legal experts**".

Jurisdiction Reference Data (tbl_ref_jurisdictions)

This script seeds jurisdiction master data used for geographical classification and claims segmentation.

```
INSERT INTO claims.tbl_ref_jurisdictions (jurisdiction_name)

```

Expert Jurisdiction & Claim Division Mapping (tbl_expert_coverage_mapping)

This script defines the relationship between:

- Experts (expert_id)
- Jurisdictions (jurisdiction_id)
- Model Name (model_name)

It enables mapping of expert firms to their areas of specialization across different jurisdictions.
